

SECTION 5

EXTERNAL PARTS

CONTENTS

Bumper .....5-1      Rear spoiler .....5-2

**Bumper**

Front and rear bumpers are newly designed; the shapes are now more aggressive and eye-catching.

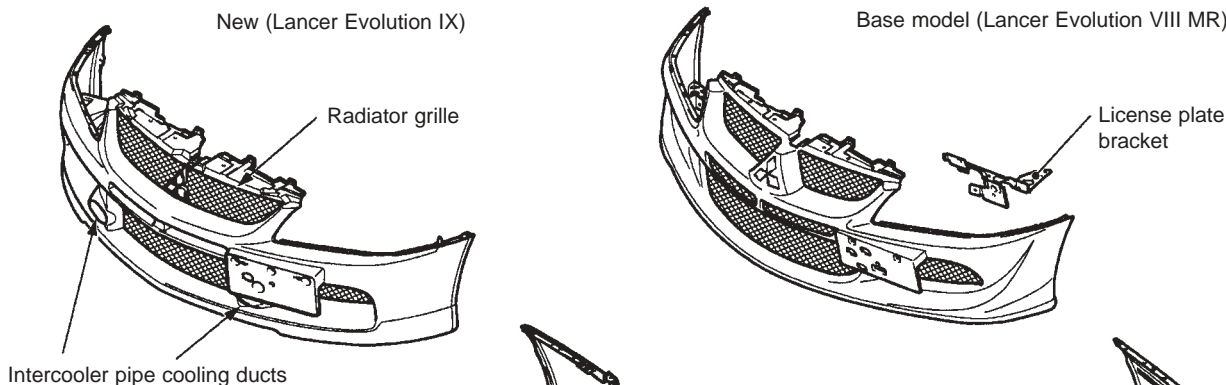

Front bumper

- Front three diamond symbol is changed
- The radiator grille is now a single grille rather than being split left/right as on the previous model.
- Intercooler pipe cooling ducts have been added to the left and right of the bumper, improving intercooler cooling performance.
- Weight has been reduced by deleting the number plate bracket fixing the number plate garnish.

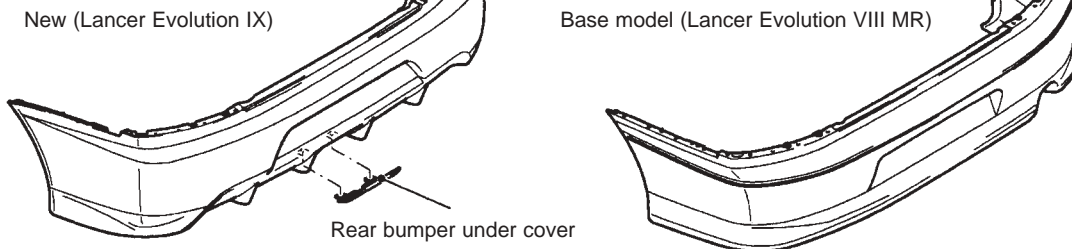

<Rear bumper>

A removable rear bumper under cover has been added to the lower side of the number plate, preventing damage to the bumper when vehicle is towing.

Front bumper

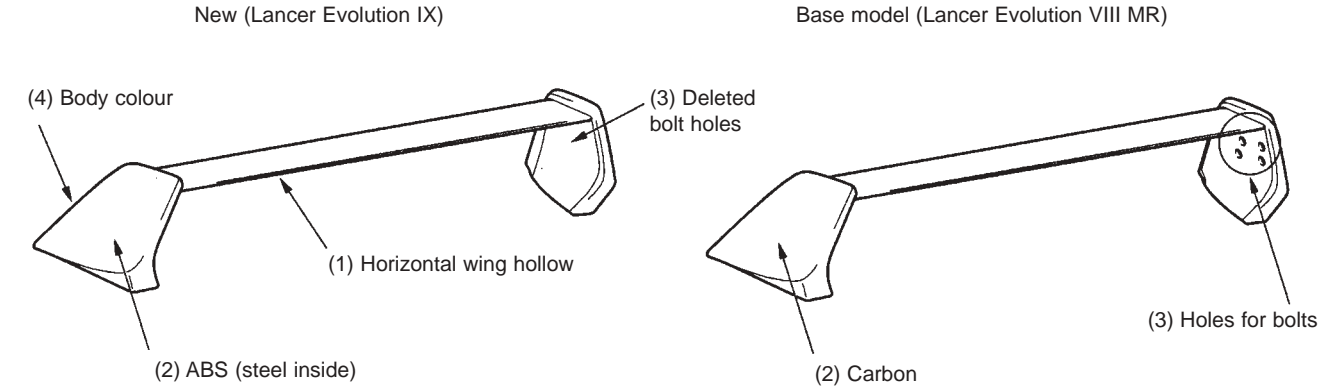

Rear bumper

## Rear spoiler

The shape of the rear spoiler has been carried over, but the following changes have been made.

- (1) The horizontal wing is now hollow, making it lighter, and giving the spoiler a lower centre of gravity.
- (2) Material used for the two vertical elements has been changed from carbon to ABS. These struts have also been strengthened by putting steel inside.
- (3) Because of the above changes, we have been able to delete the four bolt holes (on one side) in the vertical struts.
- (4) The vertical struts are now the same colour as the body, distinguishing the vehicle from the previous model.

Horizontal

[ Material : carbon fibre reinforced plastic  
Material code : CFRP  
Temperature resistance : 80 - 100°C ]

Vertical

[ Material : Acrylonitrile Butadiene Styrene  
Material code : ABS  
Temperature resistance : 80°C ]

AC500504AB

Note:

Material symbols for the materials used for the composite parts have been put in places where they do not stand out too much.
